Claims

- Use of appropriate doses of an LHRH-antagonist, peptidic or non-peptidic, that will lower sex hormone levels to a certain extent but not below the castration level.
- 2. Use of appropriate doses of an LHRH-antagonist to lower sex hormone levels resulting in modification of the T-cell population.
- 3. Use of appropriate doses of an LHRH-antagonist to lower sex hormone levels resulting in a modification of the T-cell population in an individual suffering from a disease that will respond favourably to such a modification.
- 4. Use of appropriate doses of an LHRH-antagonist to lower sex hormone levels resulting in a modification of the T-cell population in an individual suffering from a HIV infection, cancer, an auto-immune disease, benign prostatic hyperplasia, endometriosis, asthma, arthritis, dermatitis, multiple sclerosis, Jacob Creuzfeldtdisease, Alzheimer's disease an for anti-aging-treatment.
- 5. Use of appropriate doses of an LHRH-antagonist to lower sex hormone levels resulting in a modification of the T-cell population resulting in an enhanced immune response to an antigen.
- Use of appropriate doses of an LHRH-antagonist to lower sex hormone levels
 resulting in a modification of the T-cell population resulting in a decrease of host
 versus graft reaction.
- 7. Examples for substances that can be used as LHRH-antagonists according to claims 1 6 are cetrorelix, teverelix, antide, or abarelix.
- 8. Use of a LHRH-antagonist for producing a medicament for the treatment of diseases according to claims 1 to 7.

- 9. Use according to claim 8, characterized in that the LHRH-antagonist is administered in the following total dose from 5 mg to 120 mg divided in a period of 1 to 8 weeks and according to needs with repeat of the therapy every 3 to 4 months.
- 10. Use according to claims 8 and 9, characterized in that cetrorelix pamoate is administered in the following total dose from 30 mg to 120 mg divided in a period of 1 to 4 weeks and according to needs with repeat of the therapy every 3 to 4 months.
- 11. Use according to claims 8 and 9, characterized in that cetrorelix acetate is administered in teh following total dose from 5 mg to 80 mg divided in a period of 1 to 8 weeks and according to needs with repeat of the therapy every 3 to 4 months.
